

DevOps Cloud for Developers

Onde estamos em nossa jornada..

Cloud Render.com

The screenshot shows the homepage of Cloud Render.com. At the top left is the 'render' logo. The top navigation bar includes links for 'produtos', 'Preços', 'blog', 'Documentos', 'Carreiras', and a 'PAINEL' button. The main headline reads 'A maneira mais rápida de hospedar todos os seus sites estáticos.' Below this, a teal vertical bar is followed by a paragraph: 'O Render é uma nuvem unificada para criar e executar todos os seus aplicativos e sites com certificados TLS gratuitos, CDN global, proteção contra DDoS, redes privadas e implantações automáticas do Git.' At the bottom of the main content area are two buttons: 'COMECE GRATUITAMENTE' and 'CONTATO DE VENDAS'. On the right side, there is a badge for 'TE DISRUPT STARTUP BATTLEFIELD 2019 WINNER'.

Get started in minutes

Static Sites

[Static Sites](#) are automatically served over a global CDN. Add a custom domain and get free, fully-managed SSL.

New Static Site

Web Services

[Web Services](#) include zero-downtime deploys, persistent storage and PR previews. Scale up and down with ease.

New Web Service

Private Services

[Private Services](#) are only accessible within your Render network and can speak any protocol.

New Private Service

Background Workers

[Background Workers](#) are suitable for long running processes like consumers for queues and streaming.

New Worker

Cron Jobs

With [Cron Jobs](#), you can schedule any command or script to run on a regular interval.

New Cron Job

PostgreSQL

Fully-managed hosted [PostgreSQL](#) with internal and external connectivity, and automated daily backups.

New PostgreSQL

Redis

A cloud based in-memory key value datastore. Render offers fully managed hosted [Redis instances](#).

New Redis

Blueprints

A [Blueprint](#) specifies your Infrastructure as Code in a single file. Use it to set up all your services at once.

Create a new Static Site

Connect your Git repository or use an existing public repository URL.

Connect a repository

Search...

GitHub

@Nisflei • 1 repo

@ArthurMatMac • 1 repo

Configure account

GitLab

Connect account

Você pode definir os repositórios liberados no GITHUB

Config...

Public Git repository

Use a **public repository** by entering the URL below. Features like [PR Previews](#) and [Auto-Deploy](#) are not available if the repository has not been configured for Render.

Continue

Ou apenas
especificar o
repositório desejado.

Config...

You are deploying a static site for [Nisflel/AppExemplo](#).

Name

A unique name for your static site.

example-service-name

Branch

The repository branch used for your static site.

master

Root Directory Optional

Defaults to repository root. When you specify a [root directory](#) that is different from your repository root, Render runs all your commands in the [specified directory](#) and ignores changes outside the directory.

e.g. src

Build Command

This command runs in the root directory of your repository when a new version of your code is pushed, or when you deploy manually. It is typically a script that installs libraries, runs migrations, or compiles resources needed by your app.

\$

Publish directory

The [relative](#) path of the directory containing built assets to publish. Examples: `./`, `./build`, `dist` and `frontend/build`.

e.g. build
